ERG Corporate University
ERG is one of the world’s leading mining and metals companies, headquartered in Kazakhstan. To support the realization of its climate change impact policy, ERG CU developed a comprehensive truck driver training with the objectives to enhance drivers’ readiness and significantly reduce fuel consumption and tire wear. A simulator was built that replicates the original workplace of a driver. More than 1000 drivers were trained per quarter with an impressive impact on driver skills and a reduction of 30% in the operations' CO2 footprint.
